This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Research highlights

►The factors that lead to inhomogeneous spatial distribution of thermal energy are discussed. ►The spatial distribution of thermal energy varies with the geometrical structure of the model. ►The average thermal energy of the shorter springs (or the springs with fewer neighbors) is higher.
