This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

1. Time fCDE model can efficiently describe the positively skewed BTCs for gas transport in soil or gas reservoirs.
2. The fractional index is the key parameter to determine the heavy-tailed decay of gas concentration at late time period.
3. Numerical solutions of the fCDE model are explored systematically.
