This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

-Dressed solitons in dusty plasma in the presence of polarization forces acting on the dust grains are investigated.

-Dust dressed soliton solution is obtained using renormalization procedure in the reductive perturbation method.

- The polarization force increases the amplitude and the width of dressed acoustic structures.
