To appear in: *Physica A*

Received date : 29 April 2017
Revised date : 12 February 2018

Please cite this article as: S. Huang, Global dynamics of a network-based WSIS model for mobile malware propagation over complex networks, *Physica A* (2018), <https://doi.org/10.1016/j.physa.2018.02.117>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- The influence of user security awareness on the long-term spreading behavior of malware over mobile networks is further studied.
- Criteria for global asymptotical stability of the equilibria and the permanence of mobile malware are given.
- Numerical experiments are presented to illustrate the theoretical results.
