This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research highlights of MS:

- (1) We design a novel technology to obtain the network synchronization condition.
- (2) The uncertain parameters at the network nodes can be identified.
- (3) The results are suitable for the multi-link network with arbitrary topology.
- (4) The single-link network can be considered as a special case of multi-link network.
