This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- A multilayer network model is proposed to address the extractive multidocument summarization task.
- A differentiation between intra-layer and inter-layer edges allowed an improved representation of a set of documents
- Excellent performance was obtained for the PageRank measurement.
- The proposed representation allows optimized results for both English and Portuguese languages.
