Convergence improvement of differential evolution for community detection in complex networks

Jing Xiao, Yong-Jian Zhang, Xiao-Ke Xu

PII: S0378-4371(18)30148-1
DOI: <https://doi.org/10.1016/j.physa.2018.02.072>
Reference: PHYSA 19192

To appear in: *Physica A*

Received date : 16 October 2017
Revised date : 14 January 2018

Please cite this article as: J. Xiao, Y. Zhang, X. Xu, Convergence improvement of differential evolution for community detection in complex networks, *Physica A* (2018), <https://doi.org/10.1016/j.physa.2018.02.072>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

1. Two key factors affecting the convergence performance of EA-based modularity optimization algorithm are summarized.
2. A series of effective measures are designed to improve the global convergence ability of differential evolution algorithm.
3. The performance of the proposed algorithm is validated by various networks and compared with several representative algorithms.
4. The new algorithm can detect communities with high accuracy and stability.
