This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Randomizing the time series provides proper randomized networks.
- Small-world index performs appropriately with time series based randomized networks.
- Small-world structure tend to emerge about 100 days before strong earthquakes.
- Small-world index may be useful in short term seismic hazard assessment.
