This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

*This work evaluated the network robustness against subsequent failures from a very novel perspective.

*Four heuristic key nodes discovering methods were proposed.

*Extensive simulations were done in both scale-free and random networks to verify the effectiveness of the proposed methods.
