This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Statistical thermodynamics of aligned rigid rods with attractive lateral interactions: Theory and Monte Carlo simulations

G. J. dos Santos, D. H. Linares, A. J. Ramirez-Pastor

Highlights

- > The phase behavior of aligned rigid rods on a square lattice is studied. > Monte Carlo simulations and histogram reweighting technique were applied.
- > A new theoretical approach (Nematic Mean Field approximation) was presented. > The transition temperature and coverage were obtained as a function of the rod size.
