This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

We define an information driving force based on the 'big data' in the public media.
An agent-based model driven by the information driving force is proposed.
The stationary and non-stationary properties of the financial markets are simulated.
We propose a few-body model to simulate the financial market in the laboratory.
