This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- We have analyzed the behavior of the 2D Ashkin-Teller model using mean field theory.
- Three new phase diagrams are obtained by varying the crystal field values.
- Three others new phase diagrams with different quantum transverse field values.
- The multicritical behaviors are studied as a function of four-spin interaction coefficient (J_4 / J_1).
