This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**\*Highlights (for review)**

- I treat porosity fluctuations on the transport of a component in a reactive medium.
- The porosity statistics is assumed to be Gaussian.
- The equation for the average concentration is modified by the porosity statistics.
- The diffusion coefficient is renormalized by the noise and by the reaction rate.
- Supplementary non-linear terms that depend on the concentration gradient appear.
