This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights for the ms "Catching homologies by geometric entropy"–PHYSA-171223

- A geometric–entropy is proposed for characterizing networks topology
- It relies on the Riemannian volume of parameter space associated with a given network
- For both random graphs and scale–free networks it is capable of detecting homologies
