This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

Our main results are:

- In contrast to thermalization, spreading does not need chaos. We demonstrate how spreading occurs in an integrable setting.
- For the coupled oscillators, we show how sensitively the spreading depends on the spectrum of the interaction matrix.
- We compare our results to a non-integrable case.
