This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

***Highlights (for review)**

A method is developed to detect a trend change in cross-border epidemic transmission.
International travels decrease one week after the WHO alert for the SARS outbreak.
The WHO alert of phase 5 for the flu pandemic did not affect international travels.
