This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A series of experiments with mice under panic were conducted in a bi-dimensional space
- Joss sticks was adopted to drive the mice to egress with varying levels of stimulus
- The evacuation times significantly increased with the levels of stimulus
- the faster-is-slower effect was experimental verified
