This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

***Highlights (for review)**

Highlights

- We establish new theory on synchronization of nonlinearly coupled network systems with delays by a new approach.
- This new approach releases common constraints in previous synchronization theory.
- Both delay-independent and delay-dependent criteria for global synchronization are derived.
- New synchronization scenarios are explored under the present framework.
