Local modularity for community detection in complex networks

Ju Xiang, Tao Hu, Yan Zhang, Ke Hu, Jian-Ming Li, Xiao-Ke Xu,
Cui-Cui Liu, Shi Chen

PII: S0378-4371(15)00836-5

DOI: <http://dx.doi.org/10.1016/j.physa.2015.09.093>

Reference: PHYSA 16472

To appear in: *Physica A*

Received date: 23 March 2015

Revised date: 22 August 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

1. Local modularity with tunable parameter is derived by a special self-loop strategy
2. Behaviors of the local and global modularity are compared in various networks.
3. Local modularity outperforms global modularity in the LFR networks.
