This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

We examine six observer placement strategies and compare their source localization accuracy. The localization accuracy of dense networks is significantly lower than that of sparse networks. All six observer placement strategies have no significant difference on source localization accuracy. The coverage rate of observers may be the key factor which influences the source localization accuracy of the networks.
