This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The Effect of Firm Size on Fracking Safety

- Increased concentration of large firms reduced environmental violations in natural gas drilling between 2008 and 2012
- Multiple dimensions of size are associated with safer operating behavior: legal, regulatory, and brand
- Largest impacts are driven from changes in exposure to increased regulation
- Violation rate in 2012 would be nearly double if firms had remained at 2008 sizes
