This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights for “Distributed Energy Generation Techniques and the Competitive Fringe Effect in Electricity Markets”**

- We estimate a Cournot model with long-term contracts, international trade and fringe suppliers.
- Fringe suppliers increase competition and lead to a smaller spot market price.
- The pattern of the competitive fringe effect depends on the generation technology.
- Intermittent wind energy generation has a stronger effect than the CHP technology.
