Title: Economical, green route to highly fluorescence intensity carbon materials based on ligninsulfonate/graphene quantum dots composites: Application as excellent fluorescent sensing platform for detection of Fe^{3+} ions

Author: Lina Xu Wei Mao Jinrui Huang Shouhai Li Kun
Huang Mei Li Jianling Xia Qiang Chen

PII: S0925-4005(15)30772-3
DOI: <http://dx.doi.org/doi:10.1016/j.snb.2015.12.043>
Reference: SNB 19444

To appear in: *Sensors and Actuators B*

Received date: 30-8-2015
Revised date: 28-11-2015
Accepted date: 12-12-2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Economical, green route to highly fluorescence intensity carbon materials based on ligninsulfonate/graphene quantum dots composites: application as excellent fluorescent sensing platform for detection of Fe³⁺ ions
