This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

How late-modern nomads imagine tomorrow? A Causal Layered Analysis practice to explore the images of the future of young adults

Authors:

- Seyedeh Akhgar Kaboli^a
Doctoral Candidate
Corresponding author, seakka@utu.fi

- Petri Tapio^a
Professor in Futures Research

^a Finland Futures Research Centre, FI-20014 University of Turku, Finland

Highlights

- Images of the future of young adults tend to picture the future in terms of presence or absence of current sociopolitical concerns and do not seem to exceed this framework.
- Young adults' absolute pessimistic or optimistic attitudes about the future diminished their perceived locus of control. However, young adults with moderate views toward the future acknowledged humans' capacity to create change.
- Exploring and illustrating the complex images of the future of human beings who are living in the ambiguous environment of late-modernity demands a deliberate, subtle selection and combination of methods.
