### Highlights

This article is based on the reflections by a working group composed of health care experts drawn from a wide range of backgrounds in order to ensure a plurality of views

- This article identifies the main tipping points likely to have an impact on health care demand in developed countries

- The article shows that health care demand might no longer be expressed mostly by patients asserting their right to treatment but will be motivated more by the duty of each citizen to do everything possible to stay healthy

### Abstract:

*The aim of this article is to identify the main tipping points likely to have an impact on health care demand in developed countries. The article is based on several exchanges between health care experts within the framework of a working group coordinated by the authors. This article argues that there is a possibility of change in the determinants of health care demand in developed countries. Over the medium and long-term, health care demand might no longer be expressed mostly by patients asserting*
