This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This study examines the role of service time in online retailing competition.
- Its implications on safety stock are considered when determining the optimal service time.
- The model is further extended to account for the potential environmental impact when changing service time.
- Simply imposing carbon tax may not immediately lead to the reduction of carbon emission.
