This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- We propose a new cost Malmquist productivity index (CMPI) in multi-output settings with joint and output-specific inputs.
- Our new CMPI is nonparametric (i.e. not based on unverifiable assumptions on the production process).
- We define output-specific CMPIs and show how to disaggregate the CMPI in terms of output-specific cost efficiency measurements.
- We show how to deal with partial input price information and without assuming observation of the input prices.
- We establish a duality with a technical productivity index when no price data are available.
