Multi-Depot Multi-Compartment Vehicle Routing Problem, Solved By
A Hybrid Adaptive Large Neighborhood Search

Mahdi Alinaghian , Nadia Shokouhi

PII: S0305-0483(16)30355-3
DOI: [10.1016/j.omega.2017.05.002](https://doi.org/10.1016/j.omega.2017.05.002)
Reference: OME 1773

To appear in: *Omega*

Received date: 29 June 2016
Revised date: 28 April 2017
Accepted date: 5 May 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new mathematical model for multi-depot multi-compartment vehicle routing problem is presented
- A hybrid algorithm composed of adaptive large neighborhood search and VNS is designed
- Results are compared with the results of exact method, ALNS and VNS.
