Identifying Spatial Data Availability and Spatial Data Needs for
Chagas Disease Mitigation in South America

Emily Morris , Christopher Bone

PII: S1877-5845(16)30025-9
DOI: [10.1016/j.sste.2016.04.006](https://doi.org/10.1016/j.sste.2016.04.006)
Reference: SSTE 182

To appear in: *Spatial and Spatio-temporal Epidemiology*

Received date: 24 February 2015
Revised date: 4 February 2016
Accepted date: 12 April 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We conduct a literature review to determine prominent variables related to disease risk
- We perform a search to collect publically available spatial data
- Ability to identify higher risk areas from this data varies by country
- Focused data collection could more effectively control disease spread
