Title: Statistical considerations in the choice of endpoint for drug use disorder trials

Authors: Garrett M. Fitzmaurice, Stuart R. Lipsitz, Roger D. Weiss

PII: S0376-8716(17)30524-0
DOI: <https://doi.org/10.1016/j.drugalcdep.2017.09.031>
Reference: DAD 6695

To appear in: *Drug and Alcohol Dependence*

Received date: 22-6-2017
Revised date: 26-9-2017
Accepted date: 28-9-2017

Highlights

- Abstinence is the gold standard in drug use disorder clinical trials
- However relatively few study participants ever achieve complete abstinence
- This has prompted clinical trialists to consider alternative endpoints
- We highlight the increase in statistical power with a measure of frequency of use
- Beyond statistical power, clinical meaningfulness of endpoints must be considered
