This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

Highlights are mandatory for this journal. They consist of a short collection of bullet points that convey the core findings of the article and should be submitted in a separate editable file in the online submission system.

Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

- Analyses of drugs from cryptomarkets and conventional markets are compared
- Samples include cocaine, LSD, MDMA, amphetamine, ketamine and cannabis resin
- Cryptomarket-sourced drugs were less likely to be adulterated
- The main compound detected was more likely to be higher in purity
- Findings support theoretical predictions and perceptions of cryptomarket users
