This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

A stochastic model was derived to consider both the separation and interconversion.
The rate constant of quetiapine enantiomerization was determined.
The stochastic model and data were validated against chiroptical measurements.
The results agree well with the results obtained by DCXplorer.
