Title: Microfunnel-supported liquid-phase microextraction: application to extraction and determination of Irgarol 1051 and Diuron in the Persian Gulf seawater samples

Author: Abolfazl Saleh Neda Sheijooni Fumani Saeideh Molaei

PII: S0021-9673(14)00983-2
DOI: <http://dx.doi.org/doi:10.1016/j.chroma.2014.06.057>
Reference: CHROMA 355536

To appear in: *Journal of Chromatography A*

Received date: 13-4-2014
Revised date: 17-6-2014
Accepted date: 18-6-2014

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Microfunnel-supported LPME for extraction of antifouling agents in seawater samples was developed.
- A glass microfunnel device for LPME was designed for solvents less dense than water.
- The special design of MF makes it convenient to be utilized for a wide range of extraction solvent volume.
- The device is tangent to the sample surface reducing the interference in mixing efficiency.
- Analysis of samples collected from harbors of Bushehr (IR Iran) was done.
