

## Accepted Manuscript

Title: Ion chromatography with conductometric detection for quantitation of formic acid in Polish bee honey

Authors: Izabela Matysiak, Maria Balcerzak, Rajmund Michalski

PII: S0889-1575(18)30519-2  
DOI: <https://doi.org/10.1016/j.jfca.2018.07.005>  
Reference: YJFCA 3114

To appear in:

Received date: 26-9-2017  
Revised date: 27-6-2018  
Accepted date: 8-7-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Graphical abstract

Formic acid as a very effective agent against varroa mites is allowed for the use in practical beekeeping. Potential toxic effects of its excess to humans require monitoring of the residue of the chemical used in bee honeys available for consumers. Suppressed anionic chromatography with conductivity detection allows rapid evaluation of the amount of formate ions in bee honeys with adequate selectivity and sensitivity.
