Title: Metabolic switching in the hypoglycemic and antitumor effects of metformin on high glucose induced HepG2 cells

Authors: Yan Lv, Na Tian, Junsong Wang, Minghua Yang, Lingyi Kong

PII: S0731-7085(18)30331-5
DOI: <https://doi.org/10.1016/j.jpba.2018.04.029>
Reference: PBA 11928

To appear in: *Journal of Pharmaceutical and Biomedical Analysis*

Received date: 7-2-2018
Revised date: 17-4-2018
Accepted date: 17-4-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Metabolic switching in the hypoglycemic and antitumor effects of metformin on high glucose induced HepG2 cells

¹These authors contributed equally to the work.

Highlights:

- Glucose metabolic imbalance were observed in 25 mM glucose induced HepG2 cells.
- ASCA was used to study hypoglycemic and antitumor effects of metformin on IR-HepG2.
- Five metabolites play vital roles in hypoglycemic and antitumor effects of metformin.
