Title: The dynamics of a serum steroid profile after stimulation with Intravenous ACTH

Authors: Johanna M. Lindner, Anna Catharina Suhr, Stefanie H. Grimm, Patrick Möhnle, Michael Vogeser, Josef Briegel

PII: S0731-7085(17)32734-6
DOI: <https://doi.org/10.1016/j.jpba.2017.12.045>
Reference: PBA 11698

To appear in: *Journal of Pharmaceutical and Biomedical Analysis*

Received date: 1-11-2017
Revised date: 19-12-2017
Accepted date: 21-12-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The dynamics of a serum steroid profile after stimulation with Intravenous ACTH

Johanna M. Lindner^{1*}, Anna Catharina Suhr^{1#}, Stefanie H. Grimm¹, Patrick Möhnle², Michael Vogeser¹, Josef Briegel²

¹ Institute of Laboratory Medicine,

² Department of Anesthesiology,

University Hospital, LMU Munich, Germany

Both authors contributed equally to this work.

* Corresponding author: Johanna Lindner, Institute of Laboratory Medicine, Hospital of the University of Munich (LMU), Marchioninistrasse 15, 81377 Munich, Germany, Phone: +49 89 4400-73119, E-mail: johanna.lindner@med.uni-muenchen.de

Highlights:

- An extended steroid profile displays highly dynamic response to IV ACTH stimulation
- Far more pronounced relative increase of corticosterone compared to cortisol
- Corticosterone to be investigated as a novel marker of biochemical stress response
