This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlight

- The unique optical properties of nanomaterials made them candidates in the design of optical sensors
- The review summarized the design principles of nanomaterials-based optical sensors for Hg²⁺ detection
- Three kinds of optical nanosensors were included colorimetric assay, fluorometric analysis and SERS detection
