Title: On the Prediction of Critical Micelle Concentration for Sugar-Based Non-Ionic Surfactants

Authors: Alireza Baghban, Jafar Sasanipour, Mohsen Sarafbidabad, Amin Piri, Razieh Razavi

PII: S0009-3084(18)30035-5
DOI: <https://doi.org/10.1016/j.chemphyslip.2018.05.008>
Reference: CPL 4663

To appear in: *Chemistry and Physics of Lipids*

Received date: 8-3-2018
Revised date: 8-5-2018
Accepted date: 26-5-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

On the Prediction of Critical Micelle Concentration for Sugar-Based Non-Ionic Surfactants

Research Highlights

- LSSVM based quantitative structure property relationship (QSPR) model is developed to predict critical micelle concentration (CMC) for sugar-based surfactants
- A PSO algorithm was utilized to train the LSSVM model.
- Results indicate satisfactory predictions of suggested model than other previously developed models
- An outlier analysis was utilized to detect suspected data points.
