Stabilizing lithium-sulfur batteries by a composite polymer electrolyte containing mesoporous silica particles

Kazem Jeddi, Kaveh Sarikhani, Nader Taheri Qazvini, P. Chen

PII: S0378-7753(13)01154-3

DOI: [10.1016/j.jpowsour.2013.06.147](https://doi.org/10.1016/j.jpowsour.2013.06.147)

Reference: POWER 17676

To appear in: *Journal of Power Sources*

Received Date: 10 March 2013

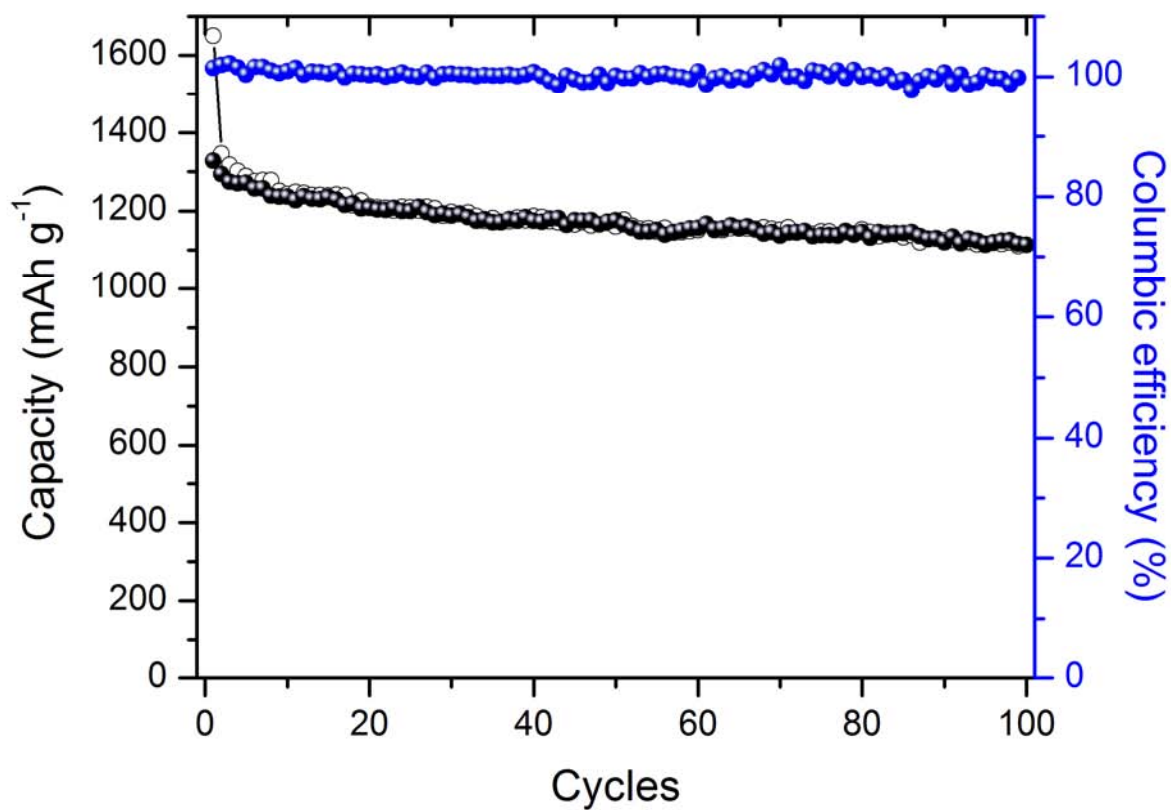

Revised Date: 25 June 2013

Accepted Date: 26 June 2013

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Coulombic efficiency and discharge capacity (at 0.2C rate) of a Li/S cell with the polymer/mesoporous particle composite electrolyte.
