Accepted Manuscript

Theoretical and experimental analysis of heat generations of a pouch type LiMn2O4/ carbon high power Li-polymer battery

Meng Xiao, Song-Yul Choe

PII: S0378-7753(13)00660-5

DOI: 10.1016/j.jpowsour.2013.04.062

Reference: POWER 17228

To appear in: *Journal of Power Sources*

Received Date: 16 February 2013

Revised Date: 8 April 2013

Accepted Date: 11 April 2013

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

- Analyzed the two most popular heat generation equations and found out their missing terms
- Designed a calorimeter to measure the heat generation of a pouch type power cell dynamically
- A electrochemical-thermal model is validated by the measurement result
