Alzheimer's disease: How metal ions define  $\beta$ -amyloid function

Kasper P. Kepp

PII: S0010-8545(17)30084-X

DOI: <http://dx.doi.org/10.1016/j.ccr.2017.05.007>

Reference: CCR 112455

To appear in: *Coordination Chemistry Reviews*

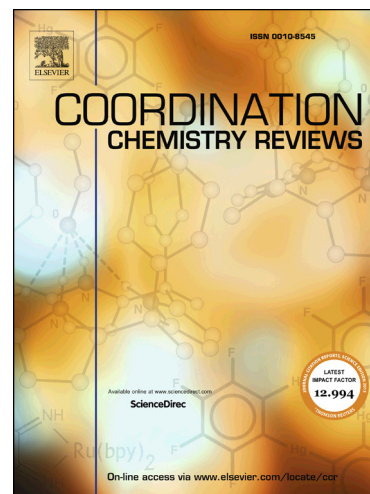

Received Date: 26 February 2017

Revised Date: 28 April 2017

Accepted Date: 2 May 2017

Please cite this article as: K.P. Kepp, Alzheimer's disease: How metal ions define  $\beta$ -amyloid function, *Coordination Chemistry Reviews* (2017), doi: <http://dx.doi.org/10.1016/j.ccr.2017.05.007>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Alzheimer's disease: How metal ions define $\beta$ -amyloid function

Kasper P. Kepp\*

### Table of contents

#### 1. Introduction

#### 2. The amyloid hypothesis

*2.1. The basis of the amyloid hypothesis.*

*2.2. Production of  $A\beta$  from APP.*

*2.3. From quantitative to qualitative gain of toxic function.*

*2.4. The "amyloid-alone" drug development crisis.*

#### 3. The evidence for a central role of Cu, Zn, and Fe in Alzheimer's disease

*3.1. Cu, Zn, and Fe ion levels in AD patients.*

*3.2. Cu, Zn, and Fe transport and storage proteins are abnormal in AD patients.*

*3.3. Cu- and Zn-interactions define APP function.*

*3.4.  $A\beta$  balance is controlled by Zn(II) and Cu(II).*

*3.5. Cu/Zn status is controlled by  $A\beta$  levels.*

#### 4. The structural chemistry of $A\beta$

*4.1.  $A\beta$  monomers.*

*4.2.  $A\beta$  oligomers.*

*4.3. The fibrillated peptides.*
