

## Accepted Manuscript

Title: Optimizing electric corona treatment for hydroxypropylated starch-based coatings

Authors: Johanna Lyytikäinen, Sami-Seppo Ovaska, Ekaterina Soboleva, Ringaudas Rinkunas, Tadeus Lozovski, Robertas Maldzius, Jonas Sidaravicius, Leena-Sisko Johansson, Kaj Backfolk

PII: S0144-8617(18)30685-4  
DOI: <https://doi.org/10.1016/j.carbpol.2018.06.030>  
Reference: CARP 13704

To appear in:

Received date: 19-3-2018  
Revised date: 5-6-2018  
Accepted date: 5-6-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

\***Corresponding author:** Johanna Lyytikäinen.

### Highlights

- Dispersion barrier coatings were treated with corona and plasma treatments
- Plasma treatment enhanced the wettability more efficiently
- Both physical and chemical changes occurred after plasma treatment
- The use of biopolymer gave different response on plasma and corona treatment
