This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research Highlights

- Chondroitin sulfate/dermatan sulfate was purified from skin of corb (CSG).
- The chemical and structural analyses of CSG were studied.
- CSG has high sulfate content and a relatively low molecular mass.
- CSG exhibited significant anticoagulant effect.
