This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Post-crosslinking towards stimuli-responsive sodium alginate beads for the removal of dye and heavy metals

Highlights:

- The SA beads were prepared via a facile post-crosslinking method.
- This strategy provided new possibilities for a large-scale preparation of SA beads.
- The beads showed excellent adsorption capacity of MB and other heavy metals.
