This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research Highlights for review

- Guar gum nanocomposite films made from organically modified and unmodified nanoclay.
- Nanoclay at 2.5 % w/w lead to improved mechanical and barrier properties of films.
- Improved physical properties were due to intercalation of guar gum in nanoclays.
- FEG-SEM images showed better compatibility between guar gum and unmodified nanoclay.
