This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Table of Contents Graphic and Synopsis

N*-phenylsulfonyl-3,5-bis(arylidene)-4-piperidone derivatives as activation*NF- κ B inhibitors in hepatic carcinoma cell lines**

Twenty four novel symmetric or dissymmetric 3,5-bis(arylidene)-4-piperidone derivatives (BAPs) were synthesized. Their cytotoxicity and anti-inflammatory activity were evaluated and BAP **23** could inhibit NF- κ B activation both in inflammation and cancer.
