Unequivocal Structural Assignments of Three Cardanol Derivatives: An Experimental and Theoretical Approach

Layla R. Barbosa, Daiane S. Souza, Luiz H.K. Queiroz, Alvaro C. Neto, Denis P. de Lima, Adilson Beatriz, Wanderson Romão, Eustaquio V.R. de Castro, Valdemar Lacerda

PII: S0022-2860(18)30937-2  
DOI: 10.1016/j.molstruc.2018.07.112  
Reference: MOLSTR 25517  
To appear in: *Journal of Molecular Structure*  
Received Date: 22 April 2018  
Accepted Date: 30 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1

2 Cardanol is a by-product of cashew production and a building block for chemical  
3 synthesis; cardanol and its derivatives can be used for different types of applications.  
4 Three of these compounds are the subject of the present NMR study and theoretical  
5 comparison.
