Synthesis of carbazole derived substances using some organoboron compounds by palladium catalyzed and investigation of its semiconductor device characteristics

Kamuran Gorgun, Yasemin Caglar

PII: S0022-2860(17)31624-1
DOI: 10.1016/j.molstruc.2017.12.004
Reference: MOLSTR 24623
To appear in: *Journal of Molecular Structure*
Received Date: 24 September 2017
Revised Date: 11 November 2017
Accepted Date: 01 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- 9-(4-(pyren-4-yl)phenyl)-9H-carbazole (Cz-Py) was synthesized by using Ullman and Suzuki coupling reactions of benzene centered novel carbazole derivative.
- ^1H NMR, elemental analysis and UV-visible spectra results were confirmed the existence of 9-(4-(pyren-4-yl)phenyl)-9H-carbazole.
- n-Si/p-Cz:py heterojunction diode was fabricated and it exhibits a rectifying behaviour.
- The electrical properties of this diode were characterized by current–voltage (I–V) and capacitance–voltage (C–V) measurements.
