This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

Seven organic salts have been prepared and characterized. The different H-bonds in the salts have been analyzed. The classical H-bonds are the primary intermolecular forces in the salts. The other non-covalent interactions are discussed in detail. Discrete ions can be constructed into 1D-3D structures *via* non-covalent interactions.
