Structural characterization and antimicrobial activities of transition metal complexes of a hydrazone ligand

Raghavendra P. Bakale, Ganesh N. Naik, Shrinath S. Machakanur, Chandrashekhar V. Mangannavar, Iranna S. Muchchandi, Kalagouda B. Gudasi

PII: S0022-2860(17)31366-2

DOI: [10.1016/j.molstruc.2017.10.035](https://doi.org/10.1016/j.molstruc.2017.10.035)

Reference: MOLSTR 24406

To appear in: *Journal of Molecular Structure*

Received Date: 30 January 2017

Revised Date: 7 September 2017

Accepted Date: 9 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Graphical abstract

The structure of the Ligand and Ni(II) complex have been characterized by single crystal X-ray diffraction studies. Evaluation of antimicrobial activity is carried out. Ligand, Cu(II) and Zn(II) complexes have exhibited excellent antifungal activity against *Candida albicans*.
